Executive Summary

D1.6 is the first scientific publication of WP1, based on the content of *D1.3 Segments of vulnerability country by country basis – inside and outside the official data*. This scientific article has been submitted to the International Journal for Disaster Risk Reduction by the main author (CK) within the official deadline (30.04.2020). The article has been revised based the received review comments, and accepted by the publisher on 20.08.2020.

On the next pages, the abstract and link to the full article can be found.

To appear in: *International Journal of Disaster Risk Reduction*

Vulnerability and vulnerable groups from an intersectionality perspective

Abstract

In general, the identification and protection of vulnerable groups in the case of hazards or when a crisis unfolds is an issue that any crisis and disaster risk management should address, since people have different levels of exposure to hazards and crises.

In this article, we promote the application of the intersectionality perspective in the study of vulnerable groups, and we call for intersectionality as a guiding principle in risk and crisis management, to provide a better and more nuanced picture of vulnerabilities and vulnerable groups. This can help national and local authorities and agencies to formulate specific guides, to hire staff with the skills necessary to meet particular needs, and to inform vulnerable groups in a particular way, taking into account the differences that may coexist within the same group.

Intersectionality allows us to read vulnerability not as the characteristic of some socio-demographic groups. It is rather the result of different and interdependent societal stratification processes that result in multiple dimensions of marginalisation. In this vein, we argue that research should focus on 1) self-perceived vulnerability of individuals and an intersectionality approach to unpack vulnerable groups; 2) cases of crises according to the level and/or likelihood of individual exposure to hazards, to better nuance issues of vulnerability.
